Chroma

As environmental issues increase,
producing coloured yarn innovatively
reduces energy consumption and water pollution.

MASTERING TRUE ASPECTS OF MODERN SUSTAINABILITY

Conventional bulk dyeing is highly water intensive. By using recycled dope-dyeing, coloured yarn is produced without using water, which helps to reduce overall water consumption by more than 50%. Compared to traditional fabric dyeing or package dyeing, this saves tremendous amounts of water

Potential Benefits:

- Reducing water and energy consumption by eliminating the dyeing process
- Deeper color penetration provides high color fastness
- Better flexibility in obtaining custom color matching
- Ability to reduce the minimum order quantity
- End product cost is lower compared to conventional fabric dyeing
- Capable of achieving colour uniformity
